Changing e-mail settings on an iPhone (or iPad)

Background:

In the coming weeks we will be migrating e-mail to a new system with significantly increased storage and new features. If you currently access Suffolk County Community College e-mail with your iPhone's e-mail program you will need to change your e-mail server. This change may be done at any time prior to your account's migration but if it is not done before the migration your phone will not be able access e-mail. (The loss of smartphone access is not permanent; the instructions below would apply to restore the function after the migration as well.)

Basic Instructions:

1. Change the server for your Suffolk County Community College e-mail account from "sunysuffolk.edu" or "owa.sunysuffolk.edu" to "mailhost.sunysuffolk.edu"

In-depth Instructions:

1. Open Settings	
2. Select Mail, Contacts, Calendars	
3. Select your Suffolk County Community College e-mail account. (Note: The account description may be different from the picture.)	4. Select your "sunysuffolk.edu" account.	
5. Change the server to “mailhost.sunysuffolk.edu” then click “Done” and verify that the Domain is listed as “sccc.a”.
