General Smartphone email Access Settings

In Android Phones you typically configure the email settings either within a settings app or in the email app. Some Android Phones may require you to delete the old account and recreate a new account to modify certain settings required below.

In iPhones you configure the email settings from within the settings app. See “Changing email server on an iPhone” instructions for a detailed explanation.

Setting	**Value**
Username	[Your username]
Password	[Your password]
Domain	sccc.a
Server name	mailhost.sunysuffolk.edu
Use SSL	[Checked or turned on]

After configuring your email or after migration you may receive a message stating that you agree to have your phone wiped remotely if it is lost.
